

— BENCHMARK + PRINCIPLES + BLUEPRINT

Call platform UI benchmark

What Ringba, Nextiva, Dialics and Teldrip get right and wrong, and the design principles, system and product blueprint that turn Avortyx into the best-looking, best-feeling platform in pay-per-call.

The Avortyx interface features a top navigation bar with the logo, a menu (Product, How it works, Pricing, FAQ, Careers), and a 'Request access' button. The main content area is titled 'Turn every inbound call into revenue' and includes a sub-header 'Live intent scoring now available'. The central dashboard displays a call flow diagram with 'INBOUND' and 'INTENT' nodes, a phone number '+1 323 *** 9499', and a list of insurance providers with their respective CAP percentages: Apex Insurance (42%), Northwind Benefits (100%), Meridian Health (67%), and Summit Care (23%). A bottom summary bar shows 'TIME TO CONNECT', 'BUYER PAYOUT', 'PUBLISHER EARNINGS', and 'ROUTED TODAY: 1283'.

— CONTENTS

What's inside

The document has three parts. Part I records what the market's leading call and VoIP platforms actually ship. Part II distils it into twelve principles. Part III turns those into a design system, an operator-console blueprint, a marketing-site plan and a roadmap that can be built in `avortyx-react`.

OVERVIEW

00	Executive summary	Six findings, one recommendation, ten moves	03
----	--------------------------	---	----

01	Scope & method	Sources, capture, scoring	04
----	---------------------------	---------------------------	----

PART I — BENCHMARK

00 · EXECUTIVE SUMMARY

The category is split between dated adtech and generic SaaS. Avortyx can own “precision instrument”.

We took apart the public sites and visible product UI of four leading call and VoIP platforms, plus both versions of Avortyx. No one in pay-per-call has built a product that looks and feels premium end to end. The pieces exist across the set, but no single competitor combines them.

1 Showing the product wins

Teldrip and Nextiva show the product through crisp coded mock UIs with believable domain data. Ringba shows glowing orbs. The Avortyx routing-engine hero is already top tier, but it renders `—` and `0 / 8` placeholders until JavaScript runs.

3 Readability is the cheapest win

Avortyx live body text measures **2.1–2.8 : 1** against its background, which fails WCAG AA. Ringba's nav is 3.1 : 1 and Dialics' hero accent is 1.8 : 1. A corrected neutral ramp alone moves Avortyx from last to first on readability.

5 Transparent pricing sets you apart in this niche

Ringba prints per-minute rates on its plan cards, Dialics publishes a per-unit table, and Teldrip answers break-even questions in its FAQ. Buyers think in cost per call, so show them the math.

2 Trust is the least developed layer

Only Nextiva ships customer logos, third-party ratings, SOC 2 / HIPAA and quantified case studies together. Ringba, Dialics and Teldrip show no customer logos. On the Avortyx site, the Privacy, Terms, TCPA and Security links in the footer point nowhere, which is risky for a compliance product.

4 Everyone runs two design systems

Nextiva runs a 2026 redesign beside a 2024 theme, and Ringba's site, app and blog use three palettes. Avortyx is heading the same way: the live site (Geist, blue) and the React rebuild (Manrope, cyan) read as two different brands.

6 Nobody has a premium operator console

In-app UI across the category is dense, dark and utilitarian (Ringba, Dialics dark mode, Teldrip Pulse). Nobody has made the operator console feel crafted. That is the open opportunity.

Recommendation. Adopt one system, **Avortyx Night**, everywhere. It keeps the live site's Geist + Geist Mono and single blue accent, rebuilds the neutral ramp for contrast, and uses the same tokens across marketing and the app. Lead with live product proof that renders real numbers on first paint. Build the trust layer before adding more animation. Then design the operator console as the flagship.

The ten moves, in order

#	MOVE	WHY	PRIORITY
01	Merge to one brand system (Geist, blue, one mark)	Two palettes and three logos make the brand look unfinished	P0
02	Replace the neutral ramp; 4.5 : 1 minimum for text	Live body copy is 2.1–2.8 : 1	P0
03	Publish legal, TCPA and security pages	Dead legal links on a compliance product	P0
04	Render real defaults server-side (no <code>—</code> , no <code>0/8</code>)	Crawlers, previews and slow devices see an empty product	P0
05	Build a real lead-capture flow with product picker and instant booking	The rebuild uses <code>mailto: ;</code> Nextiva and Teldrip route straight to a calendar	P0
06	Trust stack: verified logos, metric chips, compliance strip	Credibility is the biggest conversion lever in this category	P1
07	Pricing page with per-call math and a calculator	Matches buyer mental model; best-in-class at Ringba	P1
08	Honest comparison pages (vs Ringba, Retreaver, TrackDrive)	Teldrip's template is the strongest persuasion pattern in the set	P1
09	Design the operator console (live ops, routing, call detail)	The category's open opportunity, and the thing the site sells	P1
10	Replace marketing mocks with real console components	One source of truth; the marketing site becomes a product demo	P2

— 01 · SCOPE & METHOD

What was examined, and how

Each platform was studied from an offline mirror of its public site, captured as rendered pages and read at the level of its CSS. Every value in this report (hex codes, type sizes, radii, contrast ratios) was taken from that source code. Values were not estimated from screenshots.

PLATFORM	WHAT IT SELLS	SOURCE & STACK	EXAMINED
Ringba	Call tracking, Ring Tree® (RTB), IVR, white label, caller profile for pay-per-call	ringba.com mirror, 4,368 files. Custom webpack (dev build), GSAP 2, jQuery, Lottie	Home, pricing, 5 product pages, blog; 8 app screenshots
Nextiva	UCaaS, contact center and AI CX (“NEXT” platform, “XBert” AI employee)	nextiva.com mirror, 15,188 files. WordPress with “design-v2” block CSS, jQuery, Wistia	Home, pricing, 3 product pages, compare; 18 app images
Dialics	Call tracking, routing, reporting and pay-per-call for affiliates and SMBs	dialics.com mirror, 1,446 files. Nuxt 3, Tailwind v3 custom theme	Home, pricing, 5 feature pages, demo; 21 app images
Teldrip	Two products: Pulse (call intelligence, RTB) and Signal (cloud telephony, AI dialer)	teldrip.com mirror, 175 files. Next.js (Turbopack), global CSS with custom properties	Home, 3 pricing pages, 6 feature pages, comparisons; coded mocks
Avortyx · live	First-ring intent scoring and buyer routing for pay-per-call	avortyx.com mirror, 75 files. Next.js, Tailwind v4, shadcn tokens	Home, careers, request access; app routes found in bundle
Avortyx · rebuild	Same product, rebuilt marketing site	<code>avortyx-react/</code> source. React 19, Vite 7, Tailwind v4, framer-motion, R3F	All tokens, components, pages and data files

1 · Capture

Each mirror was served from a local HTTP server and driven through headless Chrome over the DevTools protocol at 1440 × 900. Pages were scrolled end to end to trigger lazy content. Scroll-reveal elements that wait on observers were forced visible so sections could be photographed.

2 · Extract

Stylesheets were read directly: color, font-size, radius, shadow and breakpoint frequencies, custom-property token sets and keyframes. Product screenshots and coded mock UIs were inspected for in-app patterns: shell, tables, charts, chips and controls.

3 · Judge

Contrast was computed with the WCAG 2.x formula. Products were scored 1–5 on eleven dimensions (see the Scorecard). The scores are expert judgements anchored to the measured evidence, and the evidence sits next to every score.

Caveats

- **Mirrors are incomplete.** Ringba's hero videos, Lottie files and tooltip art are missing (34 of 58 homepage assets), as is Teldrip's main hero image. Those areas appear blank or blurred in captures; their source files were inspected instead.
- **Public surfaces only.** In-app UI is judged from screenshots each vendor publishes (help-center images, product renders, coded mocks). Those may lag the shipping product.
- **Point in time.** Mirrors were captured on 7–8 October 2026. All four competitors redesign frequently; Nextiva visibly mid-migration.
- **Internal use.** Competitor screenshots and copy remain the property of their owners. They are reproduced here for internal design analysis and should not be published.

— PART I

Benchmark

What the leading platforms actually ship: a side-by-side matrix, a scorecard, a teardown of each competitor, a measured audit of Avortyx today, and the patterns that run across the category.

— 02 · THE LANDSCAPE AT A GLANCE

Five design languages, one category

Two families dominate. **Dark adtech** (Ringba, Teldrip, Avortyx) sells to operators who live in dashboards. **Light SaaS** (Nextiva, Dialics) sells to owners and managers. The matrix below compares what each site's code actually does.

	RINGBA	NEXTIVA	DIALICS	TELDRIP	AVORTYX · LIVE
Theme	Dark neon, violet-black	Light, warm cream and ink, desert photography	Light white with purple and yellow	Dark indigo with violet glow	Dark violet-black with blue
Canvas	#02020E	#F8F8F6	#FFFFFF	#14093D	#111014
Accent	#15DAFC · #B5FBFF	#0066FF · #0062B8	#684DB9 · #FFCD6D	#604ED6 · #9B8DEC	#3B82F6 · #60A5FA
Typefaces	Heebo 300 · Lato · Open Sans	ABC Arizona Mix (serif) · Space Grotesk	DM Sans only	Sora · Inter · JetBrains Mono	Geist · Geist Mono
Hero H1	"Inbound Call Tracking", 36 px	"All your business conversations run on Nextiva.", 64 px serif	"Looking to boost your [sales] ROI?", 80 px	"Turn every call into an intelligent revenue signal.", 80 px	"Turn every inbound call into revenue", 60 px
Product shown as	Looping video of glowing orbs	Coded glass app you can type into	Real dashboard screenshot	Coded mock on every feature page plus a dashboard render	Coded routing engine and typed config
Header	Fixed, 10 px uppercase links	Announcement bar, 4 mega menus, sales phone	Sticky white, hover mega menu	Floating glass pill, 5 mega menus	Floating pill of page anchors
Primary CTA	Get a demo · Sign up	Get a Demo · Buy Now	Start Free Trial · Book a Demo	Try Pulse · Try Signal free	Request access
Pricing	Per-minute rates on cards, toggle, matrix	Tiers, two toggles, sticky compare table	Per-unit table, no tiers	Usage and seat tiers, toggle, break-even FAQ	\$49 / \$199 / Custom
Social proof	Case-study PDFs only	Logos, 3 rating sources, SOC 2, HIPAA, case metrics	Review-site tiles, 3 quotes	Stats, avatar-free quotes, no logos	Logos and quotes (unverified)
Motion	GSAP 2, Lottie, video, scramble text	79 keyframes, endless button shine	CSS transitions, typewriter	Reveal on scroll, marquee	Reveal on scroll, typed code
Accessibility	Zoom blocked; 0 ARIA attributes	No button focus style; tabs lack roles	Focus outlines removed	One <code>:focus-visible</code> rule site-wide	Body text 2.1 : 1

Read-across. Teldrip is the closest analogue to Avortyx: dark, technical, mono labels, coded mocks, pay-per-call buyer. It is also the clearest warning. Its token system is polished, but its claims contradict each other across pages, which erodes trust faster than visual polish builds it.

Positioning map

How to read it

Horizontal: how literally the product is shown, from metaphor (Ringba's orbs) through screenshots (Dialics) to coded and interactive product UI (Teldrip, Nextiva, Avortyx live).

Vertical: how art-directed the overall craft is, from template SaaS (Dialics) to a fully directed look (Nextiva's desert photography and serif).

The rebuild has more craft than the live site but shows less of the product. Its global route map and repeated "simulated" labels pull it toward metaphor. The target sits top right: the realness of Teldrip's mocks with the craft of Nextiva, in a dark, operator-grade skin.

02 · PALETTES & TYPE, SIDE BY SIDE

Color and type, extracted from source

Swatches are the most frequent or token-defined values in each site's CSS, ordered from canvas to accent. The pattern is consistent: the strongest systems use one saturated accent against a disciplined neutral ramp.

Specimens are set in a stand-in typeface where the original font isn't licensed for this document. Sizes and tracking are the values from source. X marks text colors that fail WCAG AA on their own canvas.

One accent, many neutrals

Nextiva, the most premium-feeling site in the set, is almost entirely warm neutrals. Saturated blue is reserved for CTAs and links. Ringba spreads seven blues and cyans across one page and reads as noise.

Mono as texture

Teldrip uses JetBrains Mono 328 times for eyebrows, labels, chips and all of its mock UI. It is the single strongest cue that says “engineered”. Avortyx's live site already has Geist Mono loaded.

Ramps need middles

The live Avortyx ramp jumps from #D9D7DF (step 200) straight to #5C5B67 (step 300), so there is no readable mid-gray. Body copy falls into the gap and lands at 2.1–2.8 : 1.

Font budget

PRODUCT	FAMILIES IN USE	DELIVERY	OBSERVATION
Ringba	Heebo, Lato, Open Sans, Font Awesome 4.7	Google Fonts (loaded twice on inner pages)	Overlapping roles; a 444 KB SVG icon font
Nextiva	ABC Arizona Mix, Space Grotesk, Söhne (legacy)	Self-hosted; 230 KB variable display face	Premium pairing; legacy face still loads
Dialics	DM Sans (variable)	Self-hosted, 55 KB, preloaded	Leanest set; hierarchy comes only from size
Teldrip	Sora, Inter, JetBrains Mono	next/font , 15 woff2 subsets	Distinct trio; mono gives the technical texture
Avortyx · live	Geist, Geist Mono (marketing)	next/font , 31 woff2 files	Inter, Inter Tight and JetBrains Mono preloaded but unused (≈134 KB)
Avortyx · rebuild	Manrope, DM Sans, IBM Plex Mono	Google Fonts CSS2	Different stack from live; weights 450/550/650 snap to loaded weights

Where each product leads and lags

Each product is scored 1 (weak) to 5 (best in category) on eleven dimensions. The scores are relative to this set, not to the wider web. In-app UI is not scored for Avortyx because no app screens are public.

DIMENSION	RINGBA	NEXTIVA	DIALICS	TELDRIP	AVORTYX LIVE	AVORTYX REBUILD
Distinctiveness Ownable look; not template	3	5	2	4	4	4
Hierarchy & readability Type scale, contrast, micro text	2	4	3	3	1	3

SCORE

1

2

3

4

5

WEAK → BEST IN SET

Leaders to learn from

- **Nextiva** for trust (three rating sources, SOC 2, HIPAA, case metrics) and for the demo funnel (split modal, then instant booking).
- **Teldrip** for product proof (a coded mock on every feature page) and comparison pages.
- **Ringba** for pricing transparency: per-minute rates on cards and a full matrix.
- **Dialics** for token discipline and clear app semantics carried into marketing.

Avortyx's gap is fixable

Avortyx already ties for best on distinctiveness and is near the top on product proof. It loses on **readability** and **trust**. Both are content and token problems, not new features. Raising readability to 5, trust and IA to 4, and accessibility to 3 lifts the live average from 2.6 to 3.5, level with the leaders, before the console is even designed.

— 04 · TEARDOWN

Ringba

Neon adtech from 2019, wrapped around [the most transparent pricing page in the category](#).

CANVAS #02020E ACCENT #15DAFC TYPE HEEBO · LATO · OPEN SANS CONTAINER 1002 PX FIXED BUTTONS 40 PX PILL, 10 PX CAPS

Homepage hero. The H1 is only 36 px Heebo Light. The right half is a looping video of glowing orbs (blurred placeholder shown; the video is missing from the mirror) above a synthwave grid floor.

Positioning & voice

“Inbound Call Tracking.” Built for pay-per-call networks, affiliates, agencies and call centers; the copy assumes you already speak RTB, ping/post and eRPC. The voice is hype adtech (“Weaponize your data...”, “Pour Rocket Fuel on Your Revenue Per Call”) sitting beside partner-friendly reassurance: “No contracts, feature gatekeeping, or price gouging.”

Identity

Dark only. Violet-black canvas (#02020E / #090118), periwinkle subtitles #9BABFF, body text #8190D8, ice-cyan highlights #B5FBFF and cyan focus #15DAFC. Five color-coded plasma spheres, one per product (purple, green, blue, pink, orange), are reused in the menu, the cards and the icons. Together they form a genuine product color system.

Layout & components

Fixed-width adaptive container (1002 → 823 → 668 px), not fluid. Cards use 10 px corners and inputs 5 px. Buttons are 40 px pills with 10 px / 900 / 2 px-tracked uppercase labels, in **12 variants**; one named “green” is actually navy. Shadows are minimal; the glow comes from the imagery.

Pricing, the best page on the site. Per-minute and per-number rates printed on every plan card, a monthly/annual toggle with “Save 13% / 33%”, and “Everything in X plus” stacking. A full feature matrix follows.

Measured

Nav #4656A6 on #02020E = 3.1 : 1 at 10 px (fails). Subtitles #9BABFF ≈ 8 : 1 (passes). Viewport sets `maximum-scale=1`, which blocks zoom. The homepage has **zero** `aria-*` attributes. JS ships as unminified webpack *development* builds: 695 KB vendors plus 587 KB polyfills.

Product UI: dense, capable, and a different brand from the site

The marketing site never shows the dashboard. The app's help-center screenshots show a navy, high-density tool with some of the best configuration controls in the category. It uses a different palette from the violet-black site, and the blog diagrams add a third, light style.

Left: Predictive Routing settings. Navy sidebar #111523, active item #2D59F0, blue→green gradient priority sliders with a Default detent, toggles, uppercase micro buttons. **Right:** the Call Flows node graph (Profile blue, Dial green, Hangup orange, with success and failure ports), and Ring Tree target summary tables with zebra rows about 22 px tall.

\$0.055 / min

LOCAL TRACKING ON THE BUSINESS PLAN, PRINTED ON THE CARD

12

BUTTON VARIANTS IN ONE STYLESHEET

3.1 : 1

NAV LINK CONTRAST AT 10 PX

2.5 / 5

SCORECARD AVERAGE

Keep

- ✓ **Rates on the cards.** \$0.055 / min local, \$3 / month per number, \$0.15 per caller-profile pull, with tooltips on fee caveats and a disarming FAQ (“No contracts or setup fees? Seriously?”).
- ✓ **One color per product,** carried through nav, cards and icons.
- ✓ **Animated data vignettes** on Call Tracking: a scrambling routing table, count-up numbers and an attribution bubble cloud.
- ✓ **Floating-label inputs** with cyan focus and actionable error tooltips (“check that you include an ‘@’”).
- ✓ **Config controls:** a gradient priority slider, segmented controls, a node-based flow builder.

Avoid

- ✗ **Metaphor instead of product.** Orbs, rings and terrain stand in for a dashboard nobody gets to see.
- ✗ **Three visual systems:** violet-black site, charcoal/navy app, light Google-Slides diagrams.
- ✗ **A weak hierarchy:** a 36 px Light H1, 10 px uppercase everything, a fixed 1002 px container.
- ✗ **Copy errors** (“Its time”, “lets chat”) and tab labels that contradict their slide titles.
- ✗ **No logos, no compliance badges,** and a credit card required at signup.

→ Steal for Avortyx

1. **Print the unit economics on the plan cards:** cost per routed call, per number, per screened call. Add an annual toggle and a full matrix underneath.
2. **Give each module an identity** (Routing, Intent, Compliance, Payouts) through a glyph and a quiet tint on a neutral system, not five neon spheres.
3. **Build live-data vignettes from real console components:** a ticking routing table, buyer cap bars, count-ups. Render them with final values on the server so they never show empty.
4. **Borrow the gradient priority slider with a Default detent** for intent thresholds and buyer weights.
5. **Adopt a typed node flow builder with success and failure ports** for routing (see the Operator console blueprint).

— 05 · TEARDOWN

Nextiva

The most art-directed site in the set, and [the cleanest demo funnel](#). It runs on two design systems at once.

CANVAS #F8F8F6 INK #1A1A1A CTA #0066FF TYPE ABC ARIZONA MIX + SPACE GROTESK BUTTONS 6 PX, ARROW CHIP

Homepage hero. Navy desert-dawn photograph, a rating eyebrow with an animated review count, a 64 px serif H1, Get a Demo / Buy Now, and a coded glass “Nextiva App” that slides in from the right.

Positioning & voice

“All your business conversations run on Nextiva.” The site has pivoted from VoIP to “AI + humans”: an AI employee called XBert on a platform called NEXT. It sells to small businesses first (“Main Street”), then up to enterprise contact centers. The tone is short, declarative and lightly swaggering: “The end of Busywork.”, “Grow fearlessly with every conversation.”

Identity

Warm neutrals: cream #F8F8F6, sand #F9F4EF, borders #E1DEDA, ink #1A1A1A. There is a single CTA blue #0066FF (hover #0052CC), and the blue ramp fades into sage and sand. The art direction draws on the HQ in Scottsdale, Arizona: saguaros, mesas, star trails, grainy duotone illustrations and teal/orange-graded portraits. The footer ends in a giant wordmark over a desert sunset.

Layout & components

Buttons have 6 px corners, an inner arrow chip and a 2 px lift on hover, plus a never-ending 3 s shine. Tabs are ink-filled segments. Pill toggles switch Small business / Enterprise and Monthly / Annually (“Save up to 50%”). Testimonial cards carry a metric chip. Cards use 16–20 px corners and soft neutral shadows.

Tabbed platform showcase. Ink segmented tabs and a numbered panel holding a capability list, beside an animated mini-UI set over photography. A sticky offer bar sits along the bottom.

Measured

One H1 with a clean outline, and every image carries alt text. On the other side: .btn has no :focus-visible style, tabs lack role="tab", and reduced motion only covers reveal effects. The homepage is 337 KB of HTML with 119 script tags and 79 keyframes, and the display face weighs 230 KB.

Product UI: glass renders, enterprise reality

On design-v2 pages the product is mostly coded HTML/CSS. The hero inbox even accepts typed messages. Real screenshots of the agent workspace and social dashboard show a denser, greyer and older product, which leaves a visible gap between promise and reality.

Product render. A glass inbox, an “AI Summary” card with dark chips, and a KPI strip. The whole AI-plus-human story fits in one frame.

Real agent workspace. A left icon rail, a dial bar, a wrap-up timer, a workitem queue and a disposition modal with an AI summary. Dense, grey, enterprise.

3

INDEPENDENT RATING
SOURCES ON THE HOMEPAGE

2

DESIGN SYSTEMS LIVE AT
THE SAME TIME

79

KEYFRAMES LOADED ON THE
HOMEPAGE

3.6 / 5

SCORECARD AVERAGE

Keep

- ✓ **Trust architecture:** Trustpilot 4.6, G2 4.5 and Gartner 4.6, a logo marquee, “SOC 2 · HIPAA · 99.999% uptime” in the footer, and case cards that lead with a big metric (“471% productivity boost”).
- ✓ **Demo funnel:** every demo CTA opens a split modal (trust panel and short form), then routes to instant booking. The sales phone number sits in the header.
- ✓ **A coded hero you can type into:** product proof that invites play.
- ✓ **Pricing:** segment and billing toggles, strike-through anchors, an add-on row, and a sticky comparison header (“Have a question? Call”).
- ✓ **The reassurance line:** “24/7 support · No credit card required for demo · Cancel anytime.”

Avoid

- ✗ **Two coexisting systems.** Design-v2 (Arizona, cream, 6 px buttons) sits beside the 2024 legacy theme (Söhne, #3758F9, pill buttons). The compare pages feel like a different company.
- ✗ **Five or more blues** (#0062B8 , #06F , #0052CC , #0B4FD9 , #3758F9).
- ✗ **Product naming soup** (NEXT, NEXT Classic, NextivaONE, XBert, NextIQ) and mega menus with 18 links each.
- ✗ **An overloaded homepage:** 14 sections, with pricing and the demo form each appearing twice.
- ✗ **Polished renders next to dated real UI.** The expectation gap shows.

→ Steal for Avortyx

1. **The split demo modal.** The left side shows a rating, two stats and one quote; the right side has a four-field form that drops straight into a calendar.
2. **Metric-chip testimonials** (“1.8 s time-to-connect” above the quote), with a ratings row once reviews exist.
3. **A hero that plays a story:** the call rings, intent is scored, a buyer wins, the call is paid. Let visitors poke it, but mark it `aria-hidden` and render final state on the server.
4. **An ownable art direction.** For Avortyx this isn't desert, it's signal: waveforms, routing traces and US area-code geography drawn in brand blue.
5. **A reassurance line under every CTA cluster**, e.g. “No setup fees · Live in a day · TCPA screening included”.

— 06 · TEARDOWN

Dialics

Honest, tidy and tokenized, with **real dashboards up front**. But it has scale without hierarchy, and a brand that could belong to anyone.

CANVAS #FFFFFF PRIMARY #684DB9 ACCENT #FFCD6D TYPE DM SANS BUTTONS 50 PX PILL, SPLIT ARROW

Homepage hero. An 80 px H1 with a CSS typewriter word (marketing | sales | pay per call) in #F4B600 at 1.8 : 1, a single CTA, and the real Reporting dashboard floating on a yellow canvas.

Positioning & voice

“Looking to boost your [sales] ROI?” The audience is performance marketers, pay-per-call affiliates and networks, call centers and SMBs. The copy uses plain, benefit-led imperatives (“Never miss a call”, “Measure what matters most”). It is earnest but generic, and copy QA is uneven (“Standart Routing”, “TREAFFIC SOURCE”, a Cyrillic “C” in a heading).

Identity

A custom Tailwind v3 theme. Purple #684DB9 has a hover (#795ECA) and pressed state (#554096), with tints #E4E4FC and #F0F0FE, ink #1C1D23 and grays #3C3F49 / #717074. A single yellow accent, #FFCD6D, marks secondary CTAs and full-bleed bands. Sections alternate between white, #F5F5F5 and dark #1C1D23.

Layout & components

Every H2 is 80 px, subtitles are 32 px, and sections carry 140 px of padding top and bottom. Corners are 25 px on cards, 50 px on buttons and 15 px on inputs. The signature component is a **split-arrow CTA**: label, a 2 px divider, then an arrow. Buttons glow purple or yellow on hover.

Steps and the split-arrow CTA. Four step cards with 30 px corners and “Try for Free” with its divided arrow, followed by yet another 80 px H2. Every section claims the same importance.

Measured

Purple on white is 6.3 : 1 and body gray 4.9 : 1 (both pass). The typewriter yellow is 1.8 : 1 (fails). A global `:focus{outline:0}` removes focus indicators, and mega menus open on hover only. On the plus side the pages are prerendered, the hero WebP is responsive with `fetchpriority="high"`, and the single 37 KB font is preloaded.

Product UI: clear semantics in light and dark

Dialics shows the real console and keeps its meaning consistent. The same purple / yellow / coral outcome legend appears in charts, chips and marketing art. Help-center screenshots show a well-structured dark mode with settings cards and tinted type chips.

Reporting (light). A filter bar (timezone, date range, auto-refresh), stacked calls-by-hour bars (purple converted, yellow not converted, coral no answer), a donut, and a 15-column call summary with a totals row.

Campaign detail (dark). Icon tabs with a purple underline, a tracking-number table with Static / Dynamic tinted chips, toggles, and row actions with tooltips.

THE WHOLE FONT BUDGET: ONE FAMILY

1.8 : 1

CONTRAST OF THE TYPEWRITER ACCENT

3.4 / 5

SCORECARD AVERAGE

Keep

- ✓ **A real product hero** with plausible data (Auto Insurance, Home Warranty, Legal Services) and one outcome legend carried from charts to chips to illustrations.
- ✓ **An informative mega menu:** icon plus a one-line outcome per feature, a “Platform overview / Book a Demo” promo card, and the latest posts.
- ✓ **The settings-card pattern in the app:** label and helper text on the left, the control on the right; segmented controls for modes.
- ✓ **Trial math stated plainly:** 7 days, a \$10 balance, one number.
- ✓ **“Hey AI, learn about us”:** a footer link to /llm-info for answer engines.

Avoid

- ✗ **Scale without hierarchy:** 80 px for every H2 and 140 px padding make a long, flat scroll.
- ✗ **Accessibility debt:** outlines removed, hover-only menus, an unlabeled hamburger, labels not linked to their inputs.
- ✗ **Three imagery dialects:** the yellow-canvas hero, lavender UI crops with cut-out stock people, and warm glassmorphism stock photos.
- ✗ **Pricing hides the monthly fee** that the FAQ mentions. There are no tiers and no calculator.
- ✗ **Inconsistent stats:** 50k+ users vs 12,800+ clients; “5 years” vs “since 2018”.

→ Steal for Avortyx

1. **Lead with the real product on a saturated brand field.** For Avortyx, that means the live-ops console on a deep blue glow.
2. **Pick one outcome legend and reuse it everywhere:** charts, chips, illustrations. The validated chart palette is in Part III.
3. **Use the settings-card layout** for campaign, buyer and compliance configuration.
4. **Write mega-menu items as outcomes,** add a promo slot and the latest changelog entry, and make the menu keyboard reachable.
5. **Publish an /llm-info page and footer link** so AI answer engines describe Avortyx accurately.

— 07 · TEARDOWN

Teldrip

The closest analogue to Avortyx. It has coded product mocks, mono-as-texture and [the best comparison pages in the set](#), and it undermines them with claims that contradict each other.

CANVAS #14093D BRAND #604ED6 LIVE #6EE0B7 TYPE SORA · INTER · JETBRAINS MONO BUTTONS 46 PX PILL

Homepage hero. A trust pill with an avatar stack, an 80 px Sora H1 that resolves on a gradient phrase, three CTAs, and mono microcopy ("7-day free trial on Signal · Live US numbers in 15 minutes"). The hero image is missing from the mirror.

Positioning & voice

"Turn every call into an intelligent revenue signal." Two products sit under one umbrella: **Pulse** (inbound intelligence, RTB, payouts) and **Signal** (numbers, AI dialer, voice agents). The voice is engineering-flavoured and quotes latency everywhere ("~182 ms median", "Sub-100 ms auctions"). Headlines resolve on a gradient phrase: "Six tools that don't talk. *Or one that does.*"

Identity

Dark only. Indigo #14093D steps up to surfaces at #3D3079. Hairlines are lavender #9B8DEC at 10–28% alpha, and the ink ramp runs #F4F2FF → #453F6B. The brand is violet #604ED6 / #9B8DEC, with a status trio of mint #6EE0B7, amber #FFC15C and coral #FF8E72. Three fixed radial glows and a 64 px masked grid sit behind every page.

Layout & components

Strict tokens: radius 8 / 12 / 18 / 26 / 36 / 999, and four shadow tokens including a featured glow. Buttons are 46 px pills with inset highlights. Every H2 gets a mono eyebrow with a 14 px leading rule. The header is a floating 60 px glass pill with mega menus, and "Sign in ▾" splits by product.

Platform pillars. One card recipe repeated everywhere, with the featured middle card lifted by a violet glow and an "AI CORE" badge. The mono eyebrow and gradient payoff rhythm opens the next section.

Measured

--ink-3 is 7.8 : 1 (fine), but --ink-5 is **1.9 : 1** and is used for "not available" cells. Mock text goes down to 7.5 px. There is **one** :focus-visible rule on the whole site and no skip link. The homepage loads 1.31 MB of uncompressed JS, and the same :root token block is duplicated in 15 bundles.

Product UI: a coded mock on every feature page

All 24 feature pages carry a hand-built mock inside a browser-chrome frame with a realistic mono URL. Each uses credible domain data: bid latencies, TCPA caps, payout splits. The homepage adds rendered dashboards: Pulse in dark, Signal in light.

RTB test bench (coded). A Simulation pill and bidder rows showing latency with WON / BID / GEO CAP / NO BID chips. The winner panel splits the money three ways: \$44.00 / \$35.20 / \$8.80.

Pulse dashboard render. KPI tiles with mono labels, stacked calls-by-hour bars, a donut, and top-N tables with Today / MTD / YTD tabs. Signal's light workspace sits behind it.

24

FEATURE PAGES WITH A
CODED MOCK UI

~182 ms

MEDIAN-LATENCY CLAIM
REPEATED ACROSS PAGES

1

FOCUS-VISIBLE RULE ON
THE WHOLE SITE

3.6 / 5

SCORECARD AVERAGE

Keep

- ✓ **Coded mocks with real domain data:** crisp at any DPI, light to load, cheap to update.
- ✓ **The honest comparison template:** a “Who should stay on Ringba” callout, rows conceded to the competitor, dated sources, a corrections@ address, and a 7-day parallel-run migration.
- ✓ **The latency journey:** five numbered stages, each with a mint ms chip (~30 ms, ~18 ms, ~61 ms, ~91 ms).
- ✓ **A product-picker demo modal,** and hero CTAs that deep-link to app signup with risk reversal (“No credit card”, “\$5 free credit”).
- ✓ **Status-tagged capability cards:** Live (pulsing), AI, Coming soon.

Avoid

- ✗ **Contradictions.** A Pulse trial is promised but the trial is Signal-only elsewhere; one plan is “unmetered” while its table cell shows “—”; HIPAA is both “coming soon” and listed; “70+ integrations” with 9 shown.
- ✗ **Weak proof:** faceless avatars, no logos, sample-data company names (“Northwind”), and six “Coming soon” footer links including API Docs and Status.
- ✗ **Rainbow icon tiles** colored by position on the page, not by meaning; no stable Pulse / Signal color.
- ✗ **Micro text, failing ink, and missing focus states.**
- ✗ **Heavy JS** for an essentially static page.

→ Steal for Avortyx

1. **Copy the honest comparison page structure** for Avortyx vs Ringba, Retreaver, TrackDrive and Invoca.
2. **Frame mocks in browser chrome** with a real-looking URL (`app.avortyx.com / routing / medicare-oe`) and a live pill.
3. **Show a latency journey for one call:** ring → screened → scored → auctioned → bridged, each with an ms chip.
4. **Put status tags on capability cards,** so honesty about the roadmap becomes part of the design.
5. **Keep one source of truth** for every number and claim, in a content file every page imports. That is the antidote to Teldrip's contradictions.

Two sites, two brands

The live site has the stronger product story and the rebuild has the stronger craft. **Neither works as the brand on its own.** The plan is to merge them deliberately, not average them.

Live (Next.js). Outcome headline, a routing-engine mock (inbound call → intent → buyer cap bars), TCPA / DNC / VoIP chips, and a stat strip that reads **—** until a call animates in.

Rebuild (React). A 98 px Manrope headline with a cyan-to-violet gradient, a tilted “network intelligence” panel with a world map, and “Simulated demo” labels throughout.

	LIVE SITE	REACT REBUILD	DECISION FOR V2
Headline	“Turn every inbound call into revenue”	“Route better calls to the right buyers.”	KEEP LIVE it's outcome-first
Accent	Blue <code>#3B82F6</code> / <code>#60A5FA</code>	Cyan <code>#79D6F2</code> + violet <code>#B69CFF</code> + sky <code>#38BDF8</code>	KEEP LIVE one accent only
Canvas	<code>#111014</code> warm violet-black	<code>#070B10</code> blue-black	NEW neutral ink <code>#0B0C10</code>
Type	Geist + Geist Mono	Manrope + DM Sans + IBM Plex Mono	KEEP LIVE
Mark	Vortex gradient mark	Lucide <code>Cpu</code> icon; favicon file misspelled <code>avirotyx-mark.svg</code>	KEEP LIVE
IA	One page of anchors, plus careers and request access	Mega menu, 6 product pages, 7 generic pages	KEEP REBUILD extend it
Proof	Logos, 10 testimonials, comparison (unverified)	None; “Illustrative demo” badges everywhere	NEW verified proof only
Lead capture	Posts to <code>/api/accounts/access-requests/</code>	Builds a <code>mailto:</code> link	KEEP LIVE add booking
Rendering	Server-rendered; 144 elements start at opacity 0	Client-only SPA; one static <code><title></code>	NEW prerender, visible defaults
Motion	CSS reveals, typed config demo	framer-motion, 6 R3F scenes, 2.1 s loader	NEW motion tokens; no loader
Voice	Confident operator (“Nothing to refresh”)	Hedged third person (“The public site says...”)	KEEP LIVE

Measured: the readability gap

Contrast of the text colors that carry the most copy on each version, against their own canvas, compared with the proposed Avortyx Night ramp. WCAG AA requires 4.5 : 1 for body text.

TODAY · #4B465E ON #111014 · 2.1 : 1

Decisions on the first ring

Every call is scored and routed while it's still ringing. The buyer picks up before the caller ever hears hold music.

PROPOSED · FG-2 #BBC2CF ON #0B0C10 · 10.9 : 1

Decisions on the first ring

Every call is scored and routed while it's still ringing. The buyer picks up before the caller ever hears hold music.

Capabilities bento. A strong structure: the uptime tile, a LIVE chip, mono eyebrow. But the body copy sits at 2.1 : 1.

Comparison. A good format, but the coverage counters read 0 / 8 until JS animates them, and the other columns are barely legible.

Pricing. Clear three-tier logic with a glowing featured plan. It needs per-call rates, overage terms and a calculator.

Already strong: keep it

- ✓ **The hero routing engine** and the typed `defineCampaign({...})` demo, which cycles real verticals (Medicare \$65, roofing \$92, mass tort \$320).
- ✓ **Page architecture for conversion:** comparison, clear pricing, a real access flow, a uniform py-24 rhythm.
- ✓ **The rebuild's craft:** 1 px inner highlights, a noise overlay, layered gradients, well-named theme utilities (bg-card, text-fg-2).
- ✓ **The rebuild's accessibility basics:** a skip link, global :focus-visible, aria-pressed / -expanded, aria-live, thorough reduced-motion handling.
- ✓ **The rebuild's console:** controls, a severity filter and CSV export, ticking only while in view.

Holding it back

- ✗ **Contrast and micro text:** 2.1–2.9 : 1 copy, 94 sizes below 11.2 px in the rebuild, down to 7.2 px.
- ✗ **Trust:** dead legal and resource links (live), disclaimers everywhere (rebuild), support via Telegram.
- ✗ **Domain mismatch:** a world map and a Moscow buyer in a US-only, 50-state TCPA story; a fraud scene that blocks about 70% of calls.
- ✗ **Token sprawl in the rebuild:** 58 font sizes, 17 radii, 38 shadows, 281 hex literals, 12 breakpoints.
- ✗ **Weight and delay:** 1.74 MB JS on the live site plus 134 KB of unused fonts; about 930 kB of three.js and a 2.1 s artificial loader in the rebuild.

Issue register

Every issue below was observed in the live mirror or the `avortyx-react` source. Paths are relative to `avortyx-react/`. P0 means fix before any new feature work, P1 this quarter, P2 next.

#	ISSUE	EVIDENCE	FIX	WHERE	
01	Neutral ramp cliff	Step 200 <code>#D9D7DF</code> jumps to 300 <code>#5C5B67</code> ; body copy at 2.1–2.8 : 1	Adopt the Avortyx Night text ramp (fg-1...fg-4)	<code>src/index.css</code>	P0
02	Dead legal & resource links	Privacy, Terms, TCPA, Security, Docs, API, Status all <code>#</code> ; status pill links nowhere	Publish the pages; hide links until each exists	<code>layout/Footer.tsx</code>	P0
03	Two brands	Accent, canvas, fonts, mark and voice all differ (previous page)	One system; port live tokens and mark into the rebuild	<code>index.css</code> , <code>Header.tsx</code> , <code>public/</code>	P0
04	Empty product without JS	12 × <code>—</code> , 6 × <code>0/8</code> , 144 elements at opacity 0 in server HTML	Render final values; animate <i>from</i> them, gated on JS	hero, comparison components	P0
05	<code>mailto:</code> lead form	<code>SalesRequestForm</code> builds a mail link; nothing is submitted or measured	Port the access-request API; add product picker and booking	<code>components/generic/</code>	P0
06	Unverifiable social proof	Logo and testimonial company names reused as mock buyers (e.g. Meridian)	Approved customers only, or remove the section	home sections	P0
07	Token sprawl	58 text sizes, 17 radii, 38 shadows, 281 hex literals, 12 breakpoints	Tokenize (Part III); lint for raw hex and arbitrary sizes	<code>index.css</code> , <code>lib/styles.ts</code>	P1
08	Micro type	94 usages under 11.2 px, as small as 7.2 px (NetworkPanel, mobile)	12 px floor; 11 px mono labels only at <code>≥ 6 : 1</code>	home, product components	P1
09	Loader & re-hiding reveals	~2.1 s splash on every cold load; <code>once: false</code> re-hides content on scroll-up	Remove loader and double fade; reveal once	<code>Loader.tsx</code> , <code>hooks/useScrollReveal</code>	P1
10	Asset weight	Live: 1.74 MB JS, 134 KB unused fonts. Rebuild: ~930 kB three.js chunk	Split marketing from app code; drop unused fonts; poster fallback for 3D on mobile	<code>vite.config.ts</code>	P1
11	Visuals contradict the story	World map, globe with Moscow and Tokyo buyers; PowerVisual scenes mismatched to copy	US area-code and state visuals; one scene per claim	<code>home/NetworkPanel</code> , <code>product/scenes</code>	P1
12	Accessibility gaps	No skip link (live); NetworkPanel ticks ignore reduced motion; terminal controls aren't buttons	Skip link, pause controls (WCAG 2.2.2), real buttons	several	P1
13	Legacy IDs leak into UI	Overlays show “AVX / PINGPOST”, “AVX / WHITELABEL”	Rename product ids to match titles	<code>data/products.ts</code>	P2
14	Invisible to crawlers	No per-route titles, OG, Twitter or canonical tags; SPA only	Prerender routes; per-page metadata	<code>App.tsx</code> , <code>build</code>	P2
15	Widgets that can't help	Chat auto-replies that it “cannot access live product information”; draggable AI terminal	Real support or demo booking; remove terminal on mobile	<code>ChatWidget</code> , <code>AiTerminal</code>	P2

The app exists, but its UI hasn't been designed in the open. The live bundle references about 30 app routes (`/live`, `/routing`, `/buyers`, `/tcpa-shield`, `/payouts` ...), a sidebar, and a picker offering 20 accent themes. None of it is visible publicly. The console blueprint in Part III is designed to match those routes.

— 09 · PATTERNS ACROSS THE CATEGORY

How the product gets shown

The single biggest difference between the sites is how literally they show the product. The scale runs from metaphor to interactive product. The further right, the more believable, and with coded UI, the cheaper to maintain.

1 · Metaphor
Ringba's orbs and synthwave grids. Atmospheric, but says nothing about the product.

2 · Composite
Dialics feature art: a cropped UI card, a cut-out stock person, floating chips.

3 · Screenshot
Dialics hero and Teldrip's laptops. Honest, but static, and it goes stale with every release.

4 · Coded mock
Teldrip feature pages and the Avortyx engine. Crisp at any size, cheap to update.

5 · Interactive
Nextiva's typeable inbox and Avortyx's typed config. Invites play and holds attention.

Where Avortyx should sit

Stay at levels 4–5 everywhere, then move to a sixth level: **real console components** fed by a demo dataset. One component library then serves the app and the website, so the marketing page can never drift from the product. Render final state on the server and animate from it.

Rules for any mock

- Use real domain data (verticals, payouts, caps, latency), never lorem.
- 12 px minimum text inside mocks. Teldrip drops to 7.5 px.
- Use one “Sample data” convention, not a disclaimer on every element.
- Mark it `aria-hidden` and describe it in a sentence next to it.

Hero formulas

FORMULA	SEEN AT	STRENGTH	RISK
Split: outcome headline left, live product right	Avortyx live, Ringba (art)	The product is visible above the fold on a laptop	The product must render instantly; an empty state reads as broken
Centered statement, product below	Nextiva, Teldrip, Dialics	A big typographic moment; works on mobile	The product drops below the fold at 1440 × 900
Trust pill above the H1	Teldrip (avatars, 500+), Nextiva (★ 4.6), Avortyx (“Live intent scoring”)	Proof before the promise	Unverifiable numbers backfire
Gradient payoff phrase	Teldrip, Avortyx live and rebuild	Rhythm; draws the eye to the key idea	Overuse; gradient text often fails contrast
Rotating word / typewriter	Dialics	Speaks to several personas at once	Motion that never stops; 1.8 : 1 contrast

For Avortyx: keep the split hero. Add a verified-metric trust pill, render the engine mid-call with real numbers, and add one line of reassurance under the CTAs.

Navigation patterns

PATTERN	SEEN AT	VERDICT FOR AVORTYX
Floating glass pill header	Teldrip, Avortyx live	ADOPT keep it; add a scrolled state
Mega menu with one-line outcomes + promo slot	Dialics, Nextiva, Teldrip	ADOPT 6–8 items max, keyboard reachable
Sign in ▾ split by product / role	Teldrip, Nextiva	ADOPT Operator · Publisher · Buyer portals
Sales phone number in the header	Nextiva, Ringba	LATER once a sales line is staffed
Announcement bar with an offer	Nextiva	SKIP use a launch pill in the hero instead

Trust architecture

Pay-per-call buyers worry about fraud, TCPA exposure and getting paid. Trust has to be built in layers, and the cheapest layers (working legal pages, compliance specifics) are the ones most often missing.

SIGNAL	RINGBA	NEXTIVA	DIALICS	TELDRIP	AVORTYX LIVE
Working legal pages	●	●	●	●	○ dead links
Compliance specifics (TCPA, DNC, STIR/SHAKEN)	● price lines	● HIPAA, SOC 2	● feature pages	● panel	● chips, claims
Security / trust page	○	●	○	●	○
Public status page	●	●	○	○ “soon”	○
Changelog / roadmap	● blog	● news	●	○	○
Public API docs	●	●	●	○ “soon”	○

AI Voice Agent	✓ Signal AI Voice Agents — Tier-2 qualification, multi-turn conversation, deterministic escalation, native in full platform	/? Not available
Outbound dialer suite	~ Available with Teldrip Signal (separately priced) — numbers, IVR, AI dialing	/? Inbound platform; no full dialer suite
Fraud protection	✓ Fraud Intelligence — carrier edge	✓ Available
Server-side conversions	✓ Google, Meta, Bing, TikTok server-side + Salesforce, HubSpot	~ Google/Meta integrations — verify server-side list
White label	~ Available — confirm scope during trial	✓ Available
Self-serve trial	Live in ~15 min — PAYG from \$0 · Growth from \$299/mo	~ Trial referenced — length unverified

Teldrip vs Ringba. The Teldrip column is tinted, with ✓ / ~ / X glyphs. Rows Ringba wins are shown, not hidden.

Anatomy of an honest comparison page

- Disarming H1:** “Looking for a Ringba alternative? Read the honest version first.”
- “Who should stay on Ringba”** callout, in a calm accent.
- Stack diagram:** the competitor's patchwork against your single platform, with mono metrics.
- Head-to-head table** that concedes real wins (“a genuine strength”).
- Dated source footnote** and a corrections email.
- Low-risk migration:** “three steps, seven days”, running both in parallel.
- Self-reported stats labelled as such**, an FAQ, a trademark disclaimer, then the CTA strip.

— PART II

Principles

Twelve principles distilled from the benchmark. Each comes with the evidence behind it, what it means for Avortyx specifically, and a do / don't you can check a design against.

— 10 · TWELVE DESIGN PRINCIPLES

What to believe

01 Show the machine, not a metaphor

Buyers trust what they can inspect. Show the actual product, its data, states and decisions, instead of abstract art about it.

EVIDENCE

Teldrip (24 coded mocks) and Nextiva (a typeable inbox) score highest on product proof. Ringba's orbs score lowest. Dialics' honest dashboard hero beats its own stock composites.

APPLY TO AVORTYX

Back every product claim with a coded console fragment: the routing engine, buyer cap board, compliance decision log, payout ledger. Then switch to real components fed by a demo dataset.

- ✓ Real verticals, payouts, caps and latencies
- ✓ Mocks wired to a demo dataset, not hand-typed

- ✗ Globes, orbs or particle fields standing in for routing
- ✗ Screenshots that go stale with every release

02 Real numbers at first paint

The first frame is the one most people see. Ship the final state in the HTML and animate *from* it, never toward it.

EVIDENCE

Before JS runs, Avortyx live serves 12 × “—”, 6 × “0 / 8” and 144 hidden elements. Nextiva's counters start at 0. Teldrip gates its reveals on a `js-ready` class, so content stays visible if scripts fail.

APPLY TO AVORTYX

Render the engine mid-call on the server (“Routed today 1,283 · \$65 payout”), and the same for comparison counts (“8 / 8”) and stat strips. Reveal only when `html.js-ready` is set and motion is allowed.

- ✓ Progressive enhancement; reveal once
- ✓ Skeletons that match the final geometry

- ✗ `opacity-0` in server HTML; count-ups from zero
- ✗ Artificial loaders and splash screens

03 One accent, many neutrals

Color is a signal. Spend it on meaning: the one action, the live state, the risk.

EVIDENCE

Nextiva's warm neutrals with a single CTA blue read as the most premium. Ringba uses seven blues and cyans, Teldrip tints icons by their position on the page, and the rebuild runs cyan, sky and violet together.

APPLY TO AVORTYX

Use the blue `#3B82F6` family for primary action, focus and selection only. Reserve status colors (ok / warn / risk / crit) for call and compliance states, and always pair them with an icon and a label. Everything else stays neutral.

- ✓ Status chips at 10–14% tint with a matching border
- ✓ Neutral surfaces carry 90% of the UI

- ✗ Gradient body text; a rainbow tile per module
- ✗ A second accent “for variety”

04 Contrast is a feature

Operators read for hours, often in dim rooms. Every word that has to be read clears 4.5 : 1, and no text goes below 12 px.

EVIDENCE

Avortyx live body copy measures 2.1–2.8 : 1, Teldrip's `--ink-` 5 1.9 : 1, Dialics' accent 1.8 : 1, and Ringba's nav 3.1 : 1 at 10 px. Every competitor fails somewhere.

APPLY TO AVORTYX

A text ramp of fg-1 17.9, fg-2 10.9, fg-3 6.3, with fg-4 at 3.7 for disabled or decorative use only. Lint contrast in CI. A 12 px floor, with 11 px mono labels allowed only in fg-2.

- ✓ Test on the darkest canvas and on raised cards
- ✓ Contrast lint in CI on every token pair

- ✗ Lowering text opacity to “mute” it
- ✗ 10–11 px uppercase body labels

05 Type carries hierarchy; mono carries data

One sans for words, one mono for machine values. Hierarchy comes from a fixed scale, not from setting every heading at 80 px.

EVIDENCE

Teldrip's mono eyebrows and chips say “engineered”. Dialics sets every H2 at 80 px and loses hierarchy; Ringba's 36 px Light H1 loses it from the other direction. The Avortyx live site already ships Geist and Geist Mono.

APPLY TO AVORTYX

Geist for UI and prose. Geist Mono for numbers, IDs, phone numbers, latency and labels, with `tabular-nums` in tables. A nine-step scale from 12 to 72 px.

- ✓ Mono uppercase labels at +0.08–0.12em tracking
- ✓ `tabular-nums` on every column of numbers

- ✗ A third family, or weights the font doesn't ship
- ✗ 80 px for every H2

06 One system, from marketing to console

The website is the product's first screen. Tokens, components and voice are shared, so the site can never promise a different product from the one the app delivers.

EVIDENCE

Nextiva (two systems), Ringba (three palettes) and Avortyx (two brands) all show the cost. Dialics, with one outcome legend running from charts to marketing art, shows the payoff.

APPLY TO AVORTYX

One token source (`src/index.css` today, a shared package later) used by both marketing and app. Marketing mocks import app components and feed them a demo dataset.

- ✓ Version the tokens and document them in one place
- ✓ Marketing mocks import app components

- ✗ Hand-copied hex in TSX (281 instances today)
- ✗ A separate “marketing” palette

07 Earn trust in layers

Build trust from the cheapest layer up: working legal pages, compliance specifics, security and status first, then logos, outcomes and reviews.

EVIDENCE

Nextiva is the only one with the full stack. Three of the four competitors show no customer logos at all. Avortyx's legal links are dead, and its support runs through Telegram.

APPLY TO AVORTYX

Ship Privacy, Terms, TCPA and Security pages, and a compliance strip: consent capture, DNC scrubbing, STIR/SHAKEN attestation, recording disclosure. Add a status page. Then verified logos and case studies led by a metric.

- ✓ Date every claim and name its source
- ✓ A compliance strip on home, pricing and product pages

- ✗ Logos or quotes you can't verify
- ✗ Dead links to Privacy, Terms or Security

08 Price like an engineer

Pay-per-call buyers do unit economics. Show the cost per routed call, per number and per screened call, and let them model it.

EVIDENCE

Ringba prints per-minute and per-number rates on its cards. Teldrip answers break-even questions in advance ("upgrade at about \$460 / mo"). Dialics hides a monthly fee and loses trust over it.

APPLY TO AVORTYX

Plan cards that state included calls and the overage per call. A calculator (monthly calls × buyers × numbers). A full matrix with a sticky header.

- ✓ An annual toggle showing the exact saving
- ✓ A calculator whose state lives in the URL

- ✗ "Contact us" for anything below enterprise
- ✗ Monthly fees that surface only in the FAQ

09 Honest comparison beats bravado

Say who shouldn't buy you. Concede real wins, cite dated sources, and make switching low-risk.

EVIDENCE

Teldrip's vs-pages are the strongest persuasion in the set. Nextiva's combative "2-star phone service" page feels cheap, and Ringba's hype ("Weaponize your data") dates fast.

APPLY TO AVORTYX

Avortyx vs Ringba, Retreaver, TrackDrive and Invoca pages built on the seven-part anatomy, with a parallel-run migration offer.

- ✓ A "Who should stay on X" box and a corrections email
- ✓ A parallel-run migration offer

- ✗ Unlabelled self-reported stats
- ✗ Combative copy about competitors' ratings

10 Motion explains state, never decorates

Animate what changed (a call connecting, a bid winning, a cap filling) and nothing else. Respect reduced-motion settings and give every live feed a pause control.

EVIDENCE

Nextiva runs 79 keyframes and a button shine that never stops. Dialics' typewriter never stops either, and the rebuild's network ticker ignores reduced motion. Teldrip handles reduced motion globally.

APPLY TO AVORTYX

Four durations (120 / 200 / 320 / 600 ms) and two easings. Live ticks no faster than every 2 s, with a pause. No loaders. 3D is optional and off on mobile.

- ✓ Animate from final values; show "Updated 3 s ago"
- ✓ A pause control on every live feed

- ✗ Infinite decorative loops
- ✗ Shine sweeps, typewriters, endless marquees

11 Density is a setting, not an accident

Operators want dense tables; evaluators want calm. Design both densities on purpose and let the user choose.

EVIDENCE

Ringba's ~22 px app rows and Dialics' 15-column summaries are dense but tidy. Their marketing sites use 140 px section padding. Nobody designed the step between the two.

APPLY TO AVORTYX

Comfortable (40 px rows) and compact (32 px rows) modes, sticky headers, configurable columns, and numbers right-aligned in tabular mono.

- ✓ Keep the 12 px floor in compact mode too
- ✓ Density the user chooses, remembered per user

- ✗ Shrinking type to make columns fit
- ✗ Hiding columns instead of offering column config

12 Speak operator

Write like the best operator on the floor: concrete, numeric, unhedged. No hype, and no disclaimer on every element.

EVIDENCE

Avortyx live ("Nothing to refresh") has the best voice in the set. Ringba's hype and the rebuild's hedging ("The public site says...", about 150 sample/illustrative mentions) both erode credibility.

APPLY TO AVORTYX

Lead with outcomes and numbers: "Time-to-connect from 9 s to under 2." Use one "Sample data" convention, written in second person and present tense.

- ✓ Verbs plus numbers, in plain US English
- ✓ One "Sample data" tag per mock

- ✗ "Revolutionary", "lightyears ahead", "illustrative only"
- ✗ Hedging about your own product in the third person

— PART III

Blueprint

What to build: the Avortyx Night design system, a blueprint for the operator console, a plan for the marketing site, a quality bar, and a phased roadmap. The tokens map directly onto `avortyx-react/src/index.css`.

— 11 · AVORTYX NIGHT — DESIGN SYSTEM V2

Color

The system is dark-first and shared by the site and the console. It keeps what works on the live site (the blue accent, Geist, the vortex mark) and replaces the neutral ramp, so every text step has a known contrast.

#FAFAF9 can...

fg-1 · 18.7

fg-2 · 9.5

fg-3 · 5.1

accent · 4...

Same token names, different values: components never reference raw hex.

Never raw hex

Components reference role tokens (`bg-surface`, `fg-2`, `accent`) only. A lint rule rejects hex literals and arbitrary `text-[...]` sizes in TSX. That would have caught 281 literals.

Status is not a series

`ok` / `warn` / `risk` / `crit` describe a *state* and always come with an icon and a label. Charts use the `s1-s4` series in fixed order, so a “converted” bar never looks like an error chip.

Tint recipe

Chips and banners: 10–14% fill of the status color, 35% border, and text in the color’s light step. The same recipe works for accent (selected rows, info banners) at 12%.

CALL PLATFORM UI BENCHMARK

28

Typography

Geist for words, Geist Mono for machine values. The two share metrics, so numbers in mono sit flush with labels in sans. A fixed eleven-step scale replaces the 58 ad-hoc sizes in the rebuild.

Every call,
routed to revenue.

data	13 / 18	500 mono	0 · tnum	\$58,247.00 · 94.2%	Numbers, IDs, phone, latency

Floor & measure

12 px is the minimum anywhere, including inside marketing mocks. Prose runs 60–72 characters per line. Tighten heading tracking as size grows; set mono labels wide.

When to use mono

Phone numbers, money in tables, percentages, latency, IDs, timestamps, code, and uppercase labels. Never for sentences.

Figures

Use `tabular-nums` in columns, tickers and axes. Use proportional figures for hero stats. Thousands separators always (“29,317”, never “29317”).

Space, shape, depth, motion

Small, closed scales. If a value isn't on the scale it doesn't ship. This replaces 17 radii, 38 shadows and 12 breakpoints with 7, 5 and 4.

Spacing: 4 px base

Layout

Marketing container	1200 content + 32 gutters; 12 columns, 24 gap
Section padding	96 desktop · 64 tablet · 48 mobile
Header	Floating pill, 56 tall, 12 from top
App shell	Sidebar 240 (64 collapsed) · top bar 52 · content padding 24
Breakpoints	sm 640 · md 768 · lg 1024 · xl 1280

Motion tokens

TOKEN	VALUE	USE	REDUCED MOTION
duration-micro	120 ms	Hover, press, chip toggles	Instant
duration-ui	200 ms	Menus, tabs, segmented controls, tooltips	Instant
duration-panel	320 ms	Drawers, modals, the call-detail panel	Fade only, 120 ms
duration-reveal	600 ms	Section reveal on scroll, once , only when <code>js-ready</code>	No reveal; content is static
ease-standard	<code>cubic-bezier(.2,0,0,1)</code>	All UI transitions	—
ease-out-expo	<code>cubic-bezier(.16,1,.3,1)</code>	Entrances, numbers settling, the routing path drawing	—
live-tick	≥ 2000 ms	Live feeds and counters; always with a pause control and an “Updated Xs ago” stamp	Paused by default, with a play control

Icons

Lucide (already in the stack) at 16 px in UI and 20 px in navigation, 1.5 stroke, `currentColor`. Monochrome only: no rainbow icon tiles. Status icons pair with chips.

Imagery

No stock people and no globes. Use product UI, US state and area-code maps, waveforms and routing traces, in brand-blue duotone on ink.

Diagrams

Line diagrams in fg-3 with accent highlights on the active path. They use the same visual language as the console's routing graph, so a diagram on the site looks like a feature of the app.

Radius

Tags 4 · compact inputs 6 · **buttons and inputs 9** · cards 12 · panels and mock frames 16 · hero frames 24 · chips and avatars full. One button shape everywhere: no pills for buttons, which feel consumer-grade next to a precision tool.

Elevation (dark)

Components: controls

Rendered with the tokens above. One primary action per view, one button shape, and status that never relies on color alone.

BUTTONS · SM 26 · MD 32 · LG 40

Edit caps E

View call log L

Remove buyer

Buttons

- Verb first: “Create campaign”, not “New”.
- Max one primary per view; destructive actions are never primary.
- Icon buttons get a 32 px hit area and a tooltip.

Chips

- A dot plus a label, always; the dot pulses only for *Live*.
- A 10–14% status tint with a 35% border.
- Add a value where it helps: “Connected 1.8 s”.

Forms

- Labels above; helper text below; errors say how to fix it.
- Units sit inside the field in mono (“calls / day”).
- Sliders keep a visible Default detent (borrowed from Ringba).

Components: data

The pieces the console is made of, and that the marketing site should show in place of illustrations.

Number formatting

VALUE	FORMAT	RULE
Money	\$58,247 · \$65.00	No cents above \$1,000 in tiles; cents always in tables and ledgers
Rates	94.2% · ▲ 1.1 pp	One decimal; changes in percentage points, with an arrow and a sign
Durations	1.8 s · 02:14 · 182 ms	Seconds for latency and connect time; mm:ss for call length; ms only under 1 s
Phone numbers	+1 (713) ···-4410	Masked in lists; full number in call detail behind a reveal that writes to the audit log
Time	14:02:11 ET	24 h in tables, with the timezone in the column header; relative ("3 s ago") for freshness

Tables

Numbers right-aligned in tabular mono; phone numbers masked in lists. Sticky header, row hover in `bg-raised`, 32 / 40 px rows for compact / comfortable.

Meters

Cap bars use accent until 80%, then warn, and crit at the cap. The value is always printed beside the bar ("88 / 100"), never shown by color alone.

States

Every data view designs four states: loading (skeleton), empty (one action), error (cause plus retry), and partial (stale data flagged with its age).

12 · OPERATOR CONSOLE BLUEPRINT

The console the site is selling

The live bundle already references about 30 app routes. This blueprint groups them into five jobs, defines the shell, and specifies the screens that matter most: live operations, routing, and call detail. It is the category's open opportunity, because no competitor's console feels crafted.

Information architecture, built from the existing routes

OPERATE Watch and act on calls right now - Live · /live - Calls · /calls - Queue · /queue	ROUTE Decide where every call goes - Campaigns · /campaigns - Routing · /routing - Buyers · /buyers - Destinations - Numbers · /numbers - IVR · /ivr	GROW Bring in supply and demand - Publishers · /publishers - Marketplace - Referrals	UNDERSTAND Learn what drives revenue - Dashboard - Reports · /reports - Insights · /insights	PROTECT Stay compliant, provably - TCPA Shield - VoIP Shield - Blocked numbers - Audit log NEW	MONEY & ACCOUNT Get paid; run the workspace - Payouts · Billing - Integrations - Workspace · Settings - Notifications · KYC - White label
---	---	--	--	--	---

Out of scope for the product nav: `/news/daily` and `/news/crypto`, which appear in the bundle but don't belong in a pay-per-call console.

Shell anatomy

- 1 Sidebar, 240 / 64 px.** A workspace switcher, then nav grouped by job, with live counts beside items (Live 47, Queue 3).
- 2 Top bar, 52 px.** Breadcrumb, a ⌘K command palette, a persistent live counter and wallet balance (Dialics and Teldrip both do this), alerts.
- 3 Content.** Page title, a single filter row (date, campaign, timezone), KPI tiles, then views. 24 px padding, fluid width.
- 4 Drawer, 440 px.** Call, buyer or rule detail opens beside the list, never as a separate page, so operators keep their place.

Screen 1 · Live operations

The home screen for an operator on shift: what is happening now, what's at risk, and where the money is. It merges Teldrip's Pulse reporting, Dialics' live counters and the Avortyx hero engine into one view.

1 Persistent live counter. Always visible in the top bar; clicking it filters the table to live calls.

2 Five KPI tiles. Mono labels and deltas against a like-for-like baseline (same weekday), with p95 alongside p50.

3 Outcome chart. Validated s1–s4 palette in a fixed stack order, a legend, a direct label only on the peak, 2 px gaps between segments.

4 Buyer capacity. Bars turn warn at 80% and crit at the cap. The value is always printed. One click pauses a buyer or raises the cap.

5 Live table. Intent score as a bar plus a number; state chips with labels; masked caller numbers. A row opens the call drawer.

6 Freshness and pause. “Updated 2 s ago” and a pause control satisfy WCAG 2.2.2 and stop rows moving under the cursor.

Screen 2 · Routing builder

Routing is the product. The builder combines Ringba's typed node graph (success and failure ports), Teldrip's test bench and simulation strip, and a Default-detent slider, then adds what nobody has: versioning, a diff and an audit trail.

v12 draft · edited by Dana
v11 live since Oct 2 · 41,280 calls

Typed nodes

Inbound, Screen, Score, Ring tree, IVR, Fallback, End. A colored left rule shows the type, and every node exposes pass / fail ports.

Live counts on nodes

Each node shows today's pass / fail volume, so the graph doubles as a funnel.

Test before publish

Run a sample number through the plan; simulate the last 7 days; diff against the live version.

Versioned & audited

Draft → Publish with an author, a timestamp and a rollback. Compliance teams can see exactly which rule routed which call.

CALL PLATFORM UI BENCHMARK

35

The call drawer answers the three questions that drive disputes: why this buyer, was it compliant, and who gets paid what. The settings pattern borrows Dialics' layout of label and helper on the left with the control on the right, inside titled cards.

SCREEN 4 · PAYOUT LEDGER

Generated from the same call records. Every line drills down to the calls behind it.

Oct 1–7 ▾

Export CSV

Approve 2 payouts

PUBLISHER	CALLS	QUALIFIED	GROSS	SHARE	PAYOUT	STATUS
MediaFlow	3,412	2,061	\$133,965	64%	\$85,738	● Paid Oct 8
Lone Star Digital	1,288	702	\$45,630	60%	\$27,378	● Pending approval
CallBridge Partners	944	515	\$28,840	62%	\$17,881	● Pending approval
Pinewood Media	610	188	\$9,400	55%	\$5,170	● Hold · 41 disputes

The auction is shown inline: bids, latency and the winner. This settles most buyer disputes before they become tickets.

Consent certificate, DNC result, disclosure timestamp and recording rules by state, exportable as evidence.

Payout, publisher share and margin come straight from the call record. No spreadsheet reconciliation, as the live site promises.

Console patterns & rules

The rules that make dense, real-time screens calm. They apply to every view in the console and to every console fragment shown on the website.

SEARCH Calls from +1 (972) 555-0193

HELP How intent scoring works

Every action in the UI is reachable from the palette; destructive ones ask for confirmation inline.

Real-time

- Tick no faster than 2 s; batch row inserts.
- New rows slide in above a “12 new” pill, never under the cursor.
- “Updated Xs ago” on every live view; go amber after 30 s stale.
- Pause control on every feed.

Tables

- Sticky header and first column; column config saved per user.
- Numbers right-aligned, tabular mono; totals row pinned.
- Row actions on hover plus a ⋮ menu; bulk actions in a bottom bar.
- CSV export always matches the current filters.

Filters

- One filter row above content: date, campaign, timezone, then “More”.
- Active filters show as removable chips.
- Filter state lives in the URL, so views can be shared.
- Timezone is always explicit.

Roles & portals

- Operator: everything.
- Publisher portal: sources, call log, payouts.
- Buyer portal: calls received, caps, disputes.
- White label changes the logo and one accent only.

Theming

- Cut the 20 user accents to 4 (blue, violet, teal, amber).
- Status colors never change with the accent.
- Light mode later, from the same tokens.

Alerts

- Severity maps to status: info, warn, risk, crit.
- Crit (buyer down, consent failures) is real-time; the rest go into a digest.
- Every alert links to the exact view that resolves it.

On call, on a phone

Supervisors aren't always at a desk. The mobile view is for watching and acting, not configuring. It shows a live counter, two KPIs, and alerts with one-tap fixes (raise cap, pause buyer, open the call). It reuses the same tokens and components, so it costs little to build.

Accessibility in the console

- Keyboard first: every row, menu and drawer is reachable; focus is visible.
- `aria-live="polite"` for counters, `assertive` only for crit alerts.
- Charts come with a table view and text summaries.

Performance budget

- Live view interactive in under 1.5 s on a mid-range laptop.
- A 10k-row call log scrolls at 60 fps (virtualized).
- Streaming updates are diffed; no full-table re-renders.

- The splash loader and double fade

Rhythm

- 96 px section padding on desktop, 48 px on mobile
- Mono eyebrow with a 16 px rule, then H1, then a one-line lede
- One glow and one primary CTA per section, at most

Page templates

Product page

- 01 Breadcrumb, eyebrow with status tag, H1, lede, CTAs
- 02 Coded console fragment in browser chrome (`app.avortyx.com / ...`)
- 03 How it works: 3–4 numbered steps
- 04 What's inside: 6-tile feature grid
- 05 Built for: roles and verticals
- 06 Proof: a metric with a quote
- 07 FAQ, related products, CTA band

Teldrip's template, with Avortyx's real data and contrast.

Pricing

- 01 Monthly / annual toggle with the exact saving
- 02 Three plan cards: included calls, overage per call, numbers, seats
- 03 Calculator: calls per month, buyers and numbers in; monthly cost and cost per call out; state kept in the URL
- 04 Full matrix with a sticky header
- 05 FAQ including break-even and contracts
- 06 Reassurance line

Ringba's transparency, plus Teldrip's break-even honesty.

Security & compliance

- 01 Plain status for SOC 2 and HIPAA, honest about dates
- 02 How consent is captured, stored and retained
- 03 DNC, litigator and VoIP screening
- 04 STIR/SHAKEN attestation levels
- 05 Recording rules by state (one- vs two-party)
- 06 Subprocessors, DPA, `security@`

No competitor does this well for pay-per-call.

Request access flow

1 • Role

Network, publisher or buyer

2 • Four fields

Name, work email, company, monthly calls

3 • Book now

Calendar inline, or “reply within 1 business day”

The flow posts to the existing `/api/accounts/access-requests/`, and every step is tracked. The confirmation page says what happens next and links to the tour.

Compare page

Use the seven-part anatomy from the Patterns section: a disarming H1, a “Who should stay on X” box, a stack diagram, a head-to-head table that concedes real wins, dated sources with a corrections email, a parallel-run migration, then the FAQ and CTA. Start with Ringba, Retreaver, TrackDrive and Invoca.

Voice: before and after

INSTEAD OF

- ✗ “Weaponize your data with analytics lightyears ahead of our competitors.”
- ✗ “The public site says Avortyx supports compliance screening.”
- ✗ “Illustrative demo · not production data” on every widget.
- ✗ “Route better calls to the right buyers.”
- ✗ “Get started” on an invite-only product.

WRITE

- ✓ “See which source drives qualified calls, updated every two seconds.”
- ✓ “Avortyx checks every call against DNC before it rings.”
- ✓ One `SAMPLE DATA` tag per console fragment.
- ✓ “Time-to-connect dropped from 9 seconds to under 2.”
- ✓ “Request access”: say what the button does.

Person & tense

Second person, present tense, active verbs. “You see every bid” beats “Bids are visible”.

Numbers

Specific beats superlative. Date and source every claim, and keep each one in a single claims file that every page imports.

Words to retire

Revolutionary, next-generation, seamless, lightyears, crush, weaponize, illustrative-only.

Definition of done

Each competitor fails at least one of these. Making them release gates is the cheapest way to look and feel better than all four.

Accessibility · WCAG 2.2 AA

- Text contrast $\geq 4.5 : 1$ ($\geq 3 : 1$ for 24 px+ and UI glyphs), checked on token pairs in CI.
- 12 px minimum font size; no zoom blocking (`maximum-scale` is banned).
- Visible `:focus-visible` on every interactive element; a skip link on every page.
- Mega menus open on click and keyboard, not hover only. Tabs use `role="tab"`; accordions use `aria-expanded`.
- Every animation honors `prefers-reduced-motion`; live feeds and marquees have pause controls.
- Decorative mocks are `aria-hidden` and described in text; charts have a table view.

Performance budgets (marketing)

- $LCP \leq 2.0$ s, $INP \leq 200$ ms, $CLS \leq 0.05$ at p75 on mid-tier mobile.
- ≤ 170 KB gzipped JS on marketing routes, with app and auth code split out (today 1.74 MB uncompressed).
- Two font families, four files or fewer, two preloaded (today 31 files on live).
- AVIF/WebP with explicit dimensions; hero image prioritized.
- No artificial loaders. 3D lazy-loaded with a poster, and off on mobile and under reduced motion.

SEO, sharing & answer engines

- Prerendered routes with per-page title, description, Open Graph, Twitter and canonical tags.
- Sitemap, Organization and FAQPage schema.
- `/llm-info` summary page linked from the footer (borrowed from Dialics).
- Shared link previews render the real hero, not an empty state.

Content & claims QA

- One claims file (stats, compliance status, prices, integration counts) imported everywhere; no hand-typed numbers.
- Every claim dated and sourced; self-reported stats labelled.
- Spelling and grammar checks in CI; US English; thousands separators.
- Legal review of TCPA, consent and recording statements before publishing.

Design QA

- Lint rejects raw hex, arbitrary `text-[...]` / `rounded-[...]` values, and off-scale breakpoints.
- A component catalog with every state (default, hover, focus, disabled, loading, error).
- Visual regression screenshots at 375 / 768 / 1280 / 1440 widths.

Trust hygiene

- No link ships pointing to `#`; unfinished pages are hidden, not linked.
- Status page and changelog updated at least monthly.
- Logos and quotes only with written approval; case metrics verified.
- Support channel on the company domain (not Telegram) shown in the footer.

Now, next, later

Sequenced so the cheapest, highest-trust fixes ship first and every later phase builds on the token system. Effort: S under a week, M 1–3 weeks, L a month or more.

NOW · 0–4 WEEKS

Fix trust & readability

- Port live tokens, Geist and the vortex mark into `avortyx-react`; ship the new neutral ramp S
- Contrast and a 12 px floor across both sites S
- Publish Privacy, Terms, TCPA and Security; hide dead links M
- Prerender with final values; remove the loader and double fade; reveal once M
- Real access form plus booking; drop `mailto:` S
- Remove unverified proof and per-widget disclaimers S

NEXT · 1–3 MONTHS

Build the system & the pages

- Token package, lint rules and a component catalog M
- Pricing page with a calculator M
- Security & compliance, status and changelog pages M
- Four honest comparison pages M
- Seven product pages on the template, with coded console fragments L
- US-centric visuals replace the globe and map scenes M

LATER · 3–6 MONTHS

Make the console the flagship

- Design and build live ops, the routing builder, call detail and payouts L
- Shared component library for app and site, with a demo dataset L
- Publisher and buyer portals; white-label via one accent L
- Light theme from the same tokens M
- Verified case studies and third-party reviews ONGOING

Timeline

How we'll know it worked

MEASURE	WHY IT MATTERS	TARGET
Text tokens passing AA	Readability was the worst-scoring dimension	100%
Dead links in production	Trust floor for a compliance product	0
Visit → access request rate	Primary conversion; baseline once the real form ships	+50% vs baseline
Request → booked call	Instant booking is Nextiva's edge	≥ 60%
LCP p75 (mobile)	The first frame is the most-seen frame	≤ 2.0 s
Pricing → request rate	Tests the per-call math and calculator	Track; beat home
Console: time to pause a buyer	Operator efficiency under pressure	< 5 s from alert
Buyer disputes per 1k calls	Call detail explains every routing decision	–30%

— APPENDIX A · TOKEN EXPORT

Drop-in tokens for Tailwind v4

A starting point for `avortyx-react/src/index.css`. Role tokens live on `:root` (so a light theme only swaps values), and `@theme` maps them to utilities. Keep the existing utility names as aliases (`bg-card`, `text-fg-2`, `border-line-subtle`) during migration. Self-host Geist via `@fontsource-variable/geist` and `.../geist-mono`.

```
/* Avortyx Night · v2 tokens */
@import "tailwindcss";

:root {
  /* surfaces */ --bg-canvas: #0B0C10; --bg-surface: #111318; --bg-raised: #171A20;
  --bg-overlay: #1D2129; --bg-inset: #08090C;
  /* lines */ --line-subtle: rgb(255 255 255 / .07); --line: rgb(255 255 255 / .11);
  --line-strong: rgb(255 255 255 / .17);
  /* text */ --fg-1: #F3F5F8; --fg-2: #BBC2CF; --fg-3: #8A93A3; --fg-4: #646C7B;
  /* accent */ --accent-300: #93C5FD; --accent-400: #60A5FA; --accent-500: #3B82F6;
  --accent-600: #2563EB; --accent-950: #172554; --on-accent: #06101F;
  /* status */ --ok: #34C77B; --warn: #F2B544; --risk: #F0844F; --crit: #EF5A5A;
  /* charts */ --s1: #3987E5; --s2: #D95926; --s3: #199E70; --s4: #C98500;
  /* motion */ --dur-micro: 120ms; --dur-ui: 200ms; --dur-panel: 320ms; --dur-reveal: 600ms;
  --ease-standard: cubic-bezier(.2,0,0,1); --ease-out-expo: cubic-bezier(.16,1,.3,1);
}

@theme inline {
  --color-canvas: var(--bg-canvas); --color-surface: var(--bg-surface);
  --color-raised: var(--bg-raised); --color-overlay: var(--bg-overlay); --color-inset: var(--bg-inset);
  --color-card: var(--bg-surface); /* alias for existing bg-card */
  --color-line: var(--line); --color-line-subtle: var(--line-subtle); --color-line-strong: var(--line-strong);
  --color-fg: var(--fg-1); --color-fg-2: var(--fg-2); --color-fg-3: var(--fg-3); --color-fg-4: var(--fg-4);
  --color-accent: var(--accent-500); --color-accent-strong: var(--accent-400); --color-on-accent: var(--on-accent);
  --color-ok: var(--ok); --color-warn: var(--warn); --color-risk: var(--risk); --color-crit: var(--crit);
}

@theme {
  --font-sans: "Geist Variable", ui-sans-serif, system-ui, sans-serif;
  --font-mono: "Geist Mono Variable", ui-monospace, monospace;

  --text-label: 12px; --text-label--line-height: 16px;
  --text-caption: 13px; --text-caption--line-height: 18px;
  --text-sm: 14px; --text-sm--line-height: 20px;
  --text-base: 16px; --text-base--line-height: 24px;
  --text-lg: 18px; --text-lg--line-height: 28px;
  --text-h3: 20px; --text-h3--line-height: 28px;
  --text-h2: 28px; --text-h2--line-height: 34px;
  --text-h1: 40px; --text-h1--line-height: 44px;
  --text-display: 56px; --text-display--line-height: 60px;
  --text-display-xl: 72px; --text-display-xl--line-height: 72px;

  --radius-xs: 4px; --radius-sm: 6px; --radius-md: 9px; --radius-lg: 12px; --radius-xl: 16px; --radius-2xl: 24px;

  --shadow-e1: inset 0 1px 0 rgb(255 255 255 / .05), 0 1px 2px rgb(0 0 0 / .6);
  --shadow-e2: 0 12px 32px -12px rgb(0 0 0 / .9);
  --shadow-e3: 0 28px 70px -20px rgb(0 0 0 / 1);
  --shadow-glow: 0 0 1px rgb(59 130 246 / .25), 0 14px 40px -14px rgb(59 130 246 / .6);

  --breakpoint-sm: 640px; --breakpoint-md: 768px; --breakpoint-lg: 1024px; --breakpoint-xl: 1280px;
}

@media (prefers-reduced-motion: reduce) {
  *, ::before, ::after { animation-duration: .01ms !important; transition-duration: .01ms !important; }
}
```

These four steps override Tailwind's defaults for `sm - xl`. The default `2xl` stays unless you reset it with `--breakpoint-*: initial`. The rebuild's twelve ad-hoc breakpoints are mostly arbitrary `max-[...px]:` variants (137 occurrences across 21 files) plus a few media queries in `src/styles/*.css`. Migrate each one to the nearest step. Re-validate the chart palette if the series or surfaces change.

Where every number came from

SOURCE	KEY FILES EXAMINED (RELATIVE TO DEV PROJECTS\AV\)
Ringba	Ringba\www.ringba.com\ba97d1.css, e934c8.styles.css; index.html, pricing\index.html, product pages; app images in wp-content\uploads\ (Call-Flows, Training-Slider...Predictive-Routing, Ring-Tree-Target-Summary)
Nextiva	Nextiva\www.nextiva.com\assets\build\design-v2fdb6.css, mainfdb6.css, per-block CSS; index.html, nextiva-pricing.html, products\contact-center-solutions.html; images under cdn-cgi\image\...\uploads\2025-2026\

Teldrip	Teldrip\teldrip.com_next\static\chunks*.css (48 files; :root tokens in 15); index.html, pricing-*.html, pulse-*.html, signal-*.html, comparison\; _next\dashboard-hero3da8.png
Avortyx live	Avortyx\www.avortyx.com_next\static\chunks\916c40debef72792.css (tokens), 4c142278b63c6fd9.css (fonts), 77daad9276941a8b.js (hero and campaign data); index.html, careers.html, request-access.html
Avortyx rebuild	avortyx-react\src\index.css, src\lib\styles.ts, src\data\products.ts, src\data\scenarios.ts, src\components\{layout,home,product,generic}*, vite.config.ts; built dist\ captured for screenshots

Method notes

- Screenshots: headless Chrome 154 at 1440 × 900 from local HTTP servers; scroll-reveal content was forced visible for capture only.
- Contrast: WCAG 2.x relative-luminance formula on the exact hex pairs.
- Chart palettes: the s1–s4 series were validated on #111318 (lightness band, chroma, CVD and normal-vision separation, contrast). The scorecard ramp was validated as an ordinal ramp on white.
- Frequencies such as “58 sizes” and “281 hex literals” come from grep counts over source.
- Scores are expert judgements; the evidence for each sits in the teardowns.

Glossary

RTB · ring tree	Real-time bidding across buyers for each call; a tiered buyer auction
Ping / post	Two-phase bid request (ping) then call transfer (post)
DNI	Dynamic number insertion: a tracking number per visitor or source
TCPA · DNC	US Telephone Consumer Protection Act; Do-Not-Call registry
STIR/SHAKEN	Caller-ID attestation framework against spoofing
eRPC · EPC	Expected revenue per call; earnings per call
CVD ΔE	Color difference under simulated color-vision deficiency
LCP · INP · CLS	Core Web Vitals: load, responsiveness, layout stability

Usage. This document reproduces competitor screenshots, copy and color values for internal design analysis. Those materials remain the property of their owners and should not be republished. All Avortyx mock data (callers, buyers, payouts) is fictional sample data.

Every call, routed to revenue.

AVORTYX NIGHT · DESIGN SYSTEM V2 · OCTOBER 2026
